ENABLE ADDITIONAL FEATURES WITH OUR BUSINESS PACKAGE

KLEVIO BUSINESS FEATURES

The Klevio Business package gives you access to advanced key management features, Web Dashboard and premium customer support, and all features available with Klevio packages for home setup (Basic and Connect).

Subscriptions vary depending on your current setup, the number of devices you want installed and number of people that will use Klevio.

All features available under Klevio Connect	Your business & end users will get access to the consumer Klevio App to use for remote unlocking, and all the Klevio devices in use will be enabled with 3G/4G network connectivity. This means they will have the ability to automatically switch between different mobile data providers and your home or office Wi-Fi, ensuring 24/7 connectivity and service uptime.	**Live chat & phone support**	The Klevio Team is available to speak to our business users (clients and end users) via online chat support through both the Klevio website and app, or by phone at +(44) 20 3322 7981 during standard business hours (09:00 to 18:00) on any UK weekday except bank or public holidays.
Web dashboard login for central device, user and key management	The Klevio Dashboard makes multi-property management simple. It also lets you access several features that aren't available via the Klevio App, including bulk user uploads, labelling and Klevio App-less Access. It also lets you see at glance whether your Klevio device is online or offline.	**Reshareable keys**	Reshareable keys enable keys that have been shared by a master key holder to then be passed on to someone else. Once a key has been reshared in this way, it can no longer be passed on to anyone else.
API access for integration of Klevio with other services	Klevio can be integrated with your existing systems, such as your HR system, meeting room booking management platform, etc.	**App-less Access**	Klevio App-less Access lets you use Klevio for a limited time without having to download the Klevio App.
Active device monitoring & service disruption notifications	We actively monitor over 15 health alarms on your device. If anything goes wrong, we'll be in touch and provide support to prevent the device from ever dropping offline.	**Detailed event log**	Your personalised Web Dashboard can filter data by users, doors and dates.
